## Create a better tomorrow with us

Located in Braşov, Cluj-Napoca and Bucharest, Siemens Research & Development activity is represented in Romania by Advanta Development and Technology teams. Scientists, engineers and software developers support Siemens in fulfilling the demands of digitalization. We deliver product development services for hardware, software and engineering, in the field of energy, industry, e- mobility and smart infrastructure. We are experts in IT services and solutions, where web, mobile and SAP based applications are being developed and tested.

Siemens Advanta Development is involved in the development of hardware, software and automation products and solutions in the fields of energy, industry, healthcare, mobility, building technologies and e-business. The IT Services and Solutions teams provide internal support services for various Siemens platforms. They are also involved in the automated testing and development of applications on Web, mobile or SAP platforms.

Our research and development teams are active in the fields of Electronics Design & Integrated Circuits, Data Analytics & Artificial Intelligence, Software Systems & Processes Innovation and Cybersecurity & Trust. The teams from Technology group carry out their activity on new design methodologies and advanced verification of the implementations made in ASIC and FPGA, analytics and Big Data, IT, Security Software and Systems Innovation, applied research based on computational models and artificial intelligence. The world is constantly changing and we're always thinking about what's next. Can you help us build the technologies and innovations of tomorrow?
